addressing the interactions between the different design and construction variables and techniques this book illustrates best practices for

constructing economical long life concrete pavements the book proceeds in much the same way as a pavement construction project first different alternatives for concrete pavement solutions are outlined the desired performance and behaviour parameters are identified next appropriate materials are outlined and the most suitable concrete proportions determined the design can be completed and then the necessary construction steps for translating the design into a durable facility are carried out although the focus reflects highways as the most common application special features of airport industrial and light duty pavements are also addressed use is made of modeling and performance tools such as hiperpav and ltpv to illustrate behavior and performance along with some case studies as concrete pavements are more complex than they seem and the costs of mistakes or of over design can be high this is a valuable book for engineers in both the public and private sectors

this book discusses the fundamentals and practical applications of heritage conservation as an important tool of a city's development it presents case studies that demonstrate how to achieve a balance between the promotion of tourism industry and the generation of income while also seeking optimum sustainable methods for conserving the city's tradition and identity the book in hand offers useful insights to a wide array of audience aware of the need to preserve the architectural beauty of cities such as architects policymakers investors and even the wide public who is interested in ways of conserving and protecting cultural sites

this project examined various methods of innovative bridge design and construction techniques to expedite construction the following

methods have been identified as possible method of reducing the time needed for bridge construction precast substructures prefabricated composite bridge units prefabricated superstructure units such as adjacent boxes which do not need a separate wearing surface full depth precast concrete decks stay in place concrete or steel forms completely prefabricated bridges and rapid curing concrete materials the first 6 items have been tried in various states and the results of these trials can be found in an aashto technology implementation group tig report at ashtotig.org in order to find additional information on barriers to rapid construction a survey of contractors was conducted this survey showed that the main obstacle to fast bridge construction is the forming of the deck the contractors also indicated that the best way to build bridges faster was to allow the entire bridge to be closed and the reconstruction to occur all at one time one possible solution to the deck forming problem is the use of stay in place steel deck forms a survey of states showed that approximately 34 states use stay in place steel forms for decks the main concerns about using these forms are the inability to inspect the underside of the deck trapping moisture between the concrete and the form deterioration of the form and additional weight due to the flutes in the forms however those states which use sip steel forms contend that all of these concerns can be overcome an attempt was made to assess the cost of implementation but as most of the techniques are still in a pilot phase cost information was not available
